

## Guest Editorial

The 5th Mediterranean Seminar on Engineering and Technology Education was held at Piraeus University of Applied Science (PUAS) in Piraeus-Athens, Greece, between 11 and 15 September 2017. This event was organised by the Mediterranean Centre of Engineering and Technological Education, (MCETE), a *satellite centre* of World Institute for Engineering and Technology Education (WIETE) based in Melbourne, Australia, in collaboration with the WIETE.

The Seminar attracted eminent contributors from many countries of the world. They presented research papers on a wide range of topics with an overarching focus on engineering and technology education, some of which have been included in the current issue of the Global Journal of Engineering Education (GJEE), Vol.19, No.3.

It is my sincere hope that our readers will find the articles of interest and importance to their research and development effort.
